

Red Hat Training

A Red Hat training course is available for **Red Hat Enterprise Linux**

5.2. Installing the firewall-config GUI configuration tool

To use the **firewall-config** GUI configuration tool, install the firewall-config package as **root** :

```
~]# yum install firewall-config
```

Alternatively, in **GNOME**, use the **Super** key and type **Software** to launch the **Software Sources** application. Type **firewall** to the search box, which appears after selecting the search button in the top-right corner. Select the **Firewall** item from the search results, and click on the **[Install]** button.

To run **firewall-config**, use either the `firewall-config` command or press the **Super** key to enter the **Activities Overview**, type **firewall** , and press **Enter** .
